Magnetic Leather Dog Collar

Wear & Care Guide

The collar should be worn close to the skin but not tight. Avoid getting the collar wet wherever possible. If the collar does become wet, pat with a soft cloth and allow to dry naturally (do not use a radiator or other heat source).

The vigorous nature in which the collars are used may lead to the buckle loosing it's pewter finish.

Leather Care

We recommend gently cleaning the leather with warm water and saddle soap. The occasional application of a good quality hide food will help to enrich the leather. The leather will naturally soften and develop a rich patina over time. There may also be a slight indentation to the leather where the magnet module is positioned on the collar.

Fabric Care

Dry brush any dry dirt from the fabric. Use a mild detergent on a damp cloth to carefully wipe away any remaining marks. If you have any queries, please email info@bioflow.com or visit our website www.bioflow.com
